

Rabbit Digestive System Questions

- What type of digestive system do rabbits have?
- What makes them different from other animals that eat large amounts of roughage?
 - What are the 6 categories of nutrients for rabbits?
- What is the single most important nutrient for rabbits?

Rabbit Digestive System Question ANSWERS

- **What type of digestive system do rabbits have?**

Rabbits are considered monogastric herbivores. Their stomachs are not compartmentalized, similar to humans and pigs.

- **What makes them different from other animals that eat large amounts of roughage?**

They also have an enlarged cecum and colon (hindgut) like that of a horse or guinea pig to help digest high amounts of roughage.

- **What are the 6 categories of nutrients for rabbits?**

Water, protein, Carbohydrates, Fats, Minerals, Vitamins

- **What is the single most important nutrient for rabbits?**

Water
